The Sundream is a versatile and robust conservatory awning

Sundream Conservatory Awning

The Sundream Conservatory Awning is especially designed for mounting above glass roofs or pergolas, to stop sun and heat before they reach the interior of your home or business.

It is a highly versatile and robust awning which runs in sturdy aluminium guide tracks that are designed for durability and maintenance free operation.

The front bar is driven by powerful tie rods with the guide pulleys being made from high strength synthetic resin. The guided motion prevents the front bar from getting jammed or snapping out of the guide rails so ensuring a safe operation.

The roller bar has two spring units that are increasingly loaded while the awning extends so that the cover is always being kept under stress, ensuring it rolls in and out smoothly.

The design allows for a '**steer around**' function to enable the awning to turn corners of up to 90 degrees.

Awnings can extend to 6 metres wide and 6 metres in projection (limited to a total of 30 metres²) with coupled units extending up to 24 metres wide to a total of 120 metres². All awnings are motorised and powdercoated to your choice of colour.
