

ALFRESCO
Creates space outdoors

The ALFRESCO P4000 terrace awning has been specially designed for tough commercial use. Come rain or come shine, this innovative weather protection system is the ultimate solution for creating extra "space" outdoors.

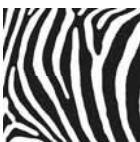

The robust and corrosion-resistant aluminium framework of the ALFRESCO P4000 allows wall fixing or top fixing using continuously adjustable brackets. You can build any number of units side by side. An electric motor allows convenient operation of the awning. The StobLock™ system keeps the fabric perfectly tensioned. The integrated gutter system ensures the sheltered area remains dry even when it rains.

The optional banner system makes it perfectly suitable as advertising space. Other convenient options, such as halogen lighting, heating systems or remote control motor, are also available.

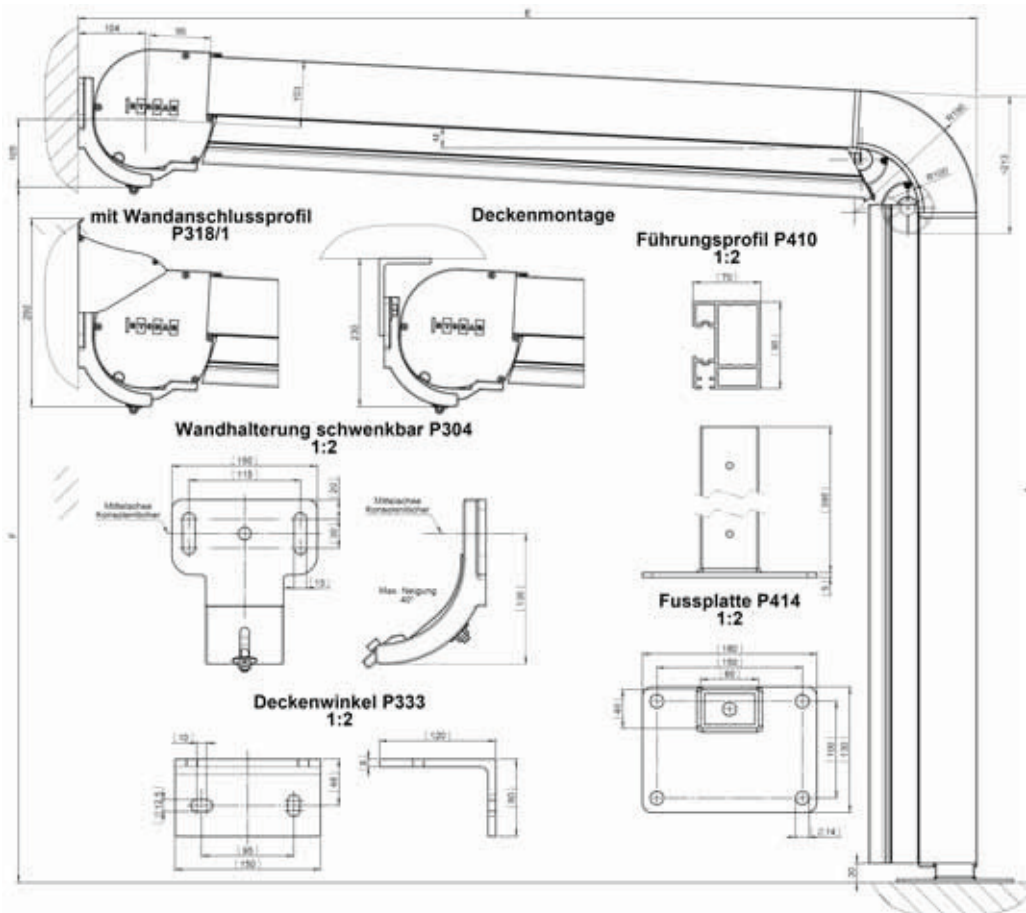

Optimum protection against sun and rain. The ultimate solution for roofed smoking areas. Ideal for hotels, restaurants, bars and cafés.
